Ao Senhor Ministro de Estado das Relações Exteriores o Representante do Brasil junto ao Comitê de Suprimentos da Administração de Assistência e Rehabilitação das Nações Unidas apresenta respeitosos cumprimentos e tem a honra de encaminhar a Sua Excelência, acompanhada dos respectivos anexos, a inclusa nota, em duplicata, pela qual o Diretor Geral da referida organização se refere às medidas que serão tomadas pelo Conselho europeu relativamente à assistência a ser prestada aos Governos dos paises que forem sendo libertados.

Washington, em 26 de Julho de 1944.

UNITED NATIONS
RELIEF AND REHABILITATION ADMINISTRATION
WASHINGTON

Excellency: 21 July 1944

I am transmitting herewith for the information of your Government, since it is a member of the Committee of the Council for Europe, a copy of a memorandum regarding the prospective import requirements of the member governments of continental Europe for the period following the interval of military responsibility in the liberated territories of those Governments. There is no immediate action required by your Government regarding this matter.

I have asked the Deputy Directors General especially concerned with this subject to discuss the memorandum with the Committee of the Council for Europe and no doubt the representative of your Government on that Committee will be informed regarding the subject matter of the memorandum as a result of that discussion.

Accept, Excellency, the assurances of my most distinguished consideration.

Herbert H. Lehman
Director General

Enclosure
His Excellency
The Minister of Foreign Affairs of
Brazil

Memorandum to the Member Governments of Continental Europe

Invitation to Prepare and Present a Program of Imports

1. The Administration is requesting each member government of a European occupied or liberated country to prepare a proposed schedule of imports for the first and second six-month periods following the interval of military responsibility. Although several tentative estimates of import requirements have been prepared previously, there is urgent need for further refinement of these estimates.

2. During the past few months the Administration has been submitting to the several Combined Boards requests for allocations of commodities which are essential to relief and rehabilitation operations in liberated European areas during the period following the interval of military responsibility. We expect to submit similar requests to the Combined Boards for additional commodities in the near future. These allocation requests are being made to give the Boards as complete a picture as possible of relief and rehabilitation requirements of the occupied or liberated areas; to allow them to take these requirements into account in their production, consumption, and reserve stock plans; and to make possible rapid procurement.

3. We have made it clear to the Boards that although the quantities we have requested are not final, our requests for allocations are firm. The quantities requested have been tentative because (a) the estimates cover only some of the areas to be liberated: (b) the estimates usually relate only to the first six months of operations after the military period: (c) the estimates have been developed in advance of the application of the procedure for preparing estimates as set forth in Resolution No.17 adopted at the First Session of the UNRRA Council; and (d) these allocation requests are for general categories of commodities and are aggregate statements only of the estimated needs of several occupied areas. Estimates of needs for individual national territories are not presented separately.

4. As soon as the Combined Boards recommend the quantities of the commodities to be allocated for relief and rehabilitation purposes on the basis of revised estimates of need, the Administration and the member governments of the occupied or liberated areas will have to arrange for initiation and rapid completion of many complex procurement operations before these allocations can be translated into actual goods available wherever and whenever the needs arise. Moreover, in view of the imminence of relief and rehabilitation operations, the Administration and the individual member governments are now faced with the problem of preparing tentative shipping programs.

5. The Administration therefore invites each government of a European occupied or liberated area to prepare its program of imports covering the first and second six-months periods following the interval of military responsibility. For the purpose of achieving comparability as to the time period covered by these programs, it is suggested that each government should assume the first six-months period to be the first half of 1945 even though it is impossible at this time to determine the period at which military responsibility for the relief of any individual country will be terminated.

6. Neither the Council nor the Committee of the Council for Europe has yet had the opportunity to recommend the bases and policies upon which estimates of relief and rehabilitation requirements should be computed, or the policies on priorities which the Director General may apply in the event of scarcity of particular supplies or transport. However, policies governing the scope of UNRRA's activities are set forth in the UNRRA Agreement, Resolution 1, and other Resolutions, including Resolutions 7 through 13, and recommendations of bases and policies are being considered in the current deliberations of the Committee of the Council for Europe, and its sub-committees. It is suggested, therefore, that each member government be guided by

these in arriving at its own interpretation of relief and rehabilitation policies as they apply to specific types and quantities of commodities. The Administration feels confident that a very helpful statement of import requirements can thus be obtained for its guidance in the immediate future.

7. To facilitate the handling of the programs by the Administration, schedules have been developed which the member governments are requested to utilize in setting forth their program of requirements.

8. Since many of the same commodities will be needed for recovery and reconstruction as for relief and rehabilitation, your Government is asked to prepare a program which will include both the commodities needed for recovery and reconstruction which you may wish to finance, and, shown separately, those commodities needed for relief and rehabilitation. With this information, the Administration will be able to be of maximum assistance on problems relating to allocations, procurement and shipping. We fully appreciate the uncertainties involved in an attempt to prepare such an import program at this time. This is especially true of requirements that go beyond basic relief needs. With respect to these, your Government may not consider it possible at this time to do more than indicate the industries and public services which it wishes most urgently to restore and the problems which may be encountered in this direction. Nevertheless, we are convinced that immediate preparation of the closest possible approximation of a complete import program will provide a basis for consultations that will enable both your Government and the Administration to proceed with planning and arrangements to an extent that would not otherwise be feasible.

9. It is essential that the Administration be informed of the extent to which its financial assistance will be sought for relief and rehabilitation supplies. Therefore the relief and rehabilitation schedule provides for the estimation of the total cost of the relief and rehabilitation imports and for an indication of the extent to which each government desires the Administration's assistance in the financing of relief and rehabilitation supplies. As soon as it has made a review of the total requests for financial assistance, the Administration will consult with the several governments with respect to the Administration's ability, in the light of its resources, to finance specific items and quantities. The government will then be able to judge the extent to which independent financing by them will be necessary. It should be noted in this connection that the Administration's resources are severely limited, and that the proportion of them which appropriately may be allocated to European areas must take account of the needs of other areas of the world where the assistance of the Administration will be required.

10. The shipping facilities that will be available for relief and rehabilitation will depend upon many factors about which the Administration has only limited information at this time. If the amount of available shipping should prove to be substantially less than that required for a full relief and rehabilitation program, the composition of the total of the supplies desired by the individual government may be appreciably different from the result of a uniform proportionate reduction of the full program. It is therefore requested that each government indicate what it would desire to have shipped on the basis of several assumptions as to the availability of shipping. The suggested schedule, therefore, contains provisions for a full import program of relief and rehabilitation supplies assuming 100 percent availability of shipping, and for a statement of priorities if only 75 percent, and only 50 percent, of the required shipping are available.

11. In the event that any member government presents an import program of relief and rehabilitation supplies which proves greater than could be justified by reference to the bases and policies recommended by the Council, or in excess of that govern-

ment's equitable share of the quantities of supplies allocated by the Combined Boards, the Director General after consultation with the several governments, will act in accordance with his obligation to seek equitable distribution of the available relief and rehabilitation supplies among all the occupied or liberated territories. He will always seek to insure that the highest equitable priorities be granted by the inter-governmental allocating agencies for those supplies and quantities which may be justified by the bases and policies recommended by the Council. The present request for information from the member governments therefore emphasizes the importance of the work of the Committee of the Council for Europe in recommending to the Council what those bases and policies should be.

12. With respect to those supplies which the member governments expect to finance, the Administration is anxious that nothing in its own procedures and programs shall impede the initiative and progress of those governments. The Administration's interest in such supplies is that of assisting in obtaining the allocations and facilitating procurement insofar as they are needed for relief and rehabilitation purposes, while assuring an equitable distribution to and among all the occupied and liberated territories. It is therefore hoped that all governments will proceed as promptly as possible with the preparation and presentation of their total import requirements to the Director General and to the Combined Boards.

13. Except as otherwise specifically requested by member governments, the Administration is planning to arrange for the procurement and shipping of only those supplies which the Administration will itself finance. To avoid inflationary effects and to facilitate the accomplishment of other desirable objectives, such as the encouragement of the production and storage of scarce commodities, the Administration is prepared to consider joint procurement action with those governments which are in a position to finance a part or all of their own imports. Should your Government be interested in such joint action, it would be appreciated if you would so notify the Administration and indicate whether you are prepared to establish accounts with UNRRA for this purpose.

Herbert H. Lehman.
Director General.

Program of Imports from outside and inside Continental Europe

Instructions Relating to Schedules

The following notes are to assist the member governments in the completion of the attached Schedules.

General notes

1. It is expected that the program can be completed by August 15. If there is any difficulty the program for the first six months' period should be completed and transmitted for all commodities before beginning on the program for the second six months' period.

2. The separate sections of the program, e.g. food, clothing, textiles and footwear, should be forwarded as rapidly as they are completed.

3. If all the information on individual items cannot be completed by the above date, please furnish the best estimate that can be made for the section and group totals as shown in attached Appendix A. (See explanation on Column 1 for purpose of Appendix A). The complete and detailed listing of the individual items under each group can then be forwarded, section by section, as rapidly as they are completed.

4. Four copies of the program (two of which should be signed) should be sent to:

For the Director-General.
United Nations Relief and Rehabilitation Administration,
c/o European Regional Office,
Supply Department,
11 Portland Place,
London, W.1., England.

5. Each section of the program forwarded to UNRRA should be signed by a responsible official of the Government and should give the name and address of the person to whom UNRRA should direct any technical enquiries that may arise, and the date on which the section is forwarded should be indicated at the top of each page.

6. The period covered is the calendar year 1945. A separate set of schedules is to be used for the first six months' period and the second six months' period.

Note that these are periods during which shipments are to be made if the proposed program can be effectuated. From the work already done, you are familiar with the seasonal and other considerations which should guide you in making adjustments between the first and second six months' periods.

7. Since many of the same commodities will be needed for recovery and reconstruction as for relief and rehabilitation, it is suggested that a program be prepared to cover recovery and reconstruction as well as a program to cover relief and rehabilitation. The major objective is to get precise information on the relief and rehabilitation program, but with the information also on the recovery and reconstruction program the Administration will be able to be of maximum assistance on problems relating to allocations, procurement and shipping. For this purpose attached Schedule 2 (B) has been devised.

8. Imports are to be shown both from inside Continental Europe and from outside Continental Europe. For purposes of this enquiry, "Continental Europe" should be interpreted to include the following countries: Albania, Austria, Belgium, Luxemburg, Bulgaria, Czechoslovakia, Denmark, Finland, France (including Corsica and Algiers), Germany, Greece, (with all islands, including the Dodecanese), Hungary, Italy (including Mediterranean Islands), Netherlands, Norway, Poland, Portugal, Rumania, Soviet Union, Spain (including Balearic Islands), Sweden, Switzerland, and Yugoslavia.

Explanation of Columns in Schedule 2A

Column 1. So far as practicable, please use the commodity classifications indicated by the Section headings in the attached Appendix A. That Appendix should not, however, be regarded as a list of items available for relief. It is simply a Price List of illustrative items. In their import program Allied Governments should therefore include under the appropriate groups any other items required. If prices of items not at present covered by Appendix A are desired, UNRRA should be asked for them. Please submit as detailed a description of the individual items as possible.

Column 2. Please indicate the unit of measurement of the metric system in which the data in Columns 3, 4 and 6 are expressed. The unit used (for example, kilogram, meter) should be the most appropriate to each commodity.

In case information on individual items cannot be furnished and the figures relate to a broad group of commodities, for example, "General Purpose Industrial Machinery and Equipment", in which the size of the individual items varies widely, the unit should be in terms of weight. Whenever a weight unit is used, this should be interpreted to mean the net weight of the commodity. Unit descriptions should be exact and specific.

Column 3. This column is the sum of columns 4 and 6. The Committee of the Council for Europe and its technical sub-committees are currently engaged in making recommendations on the bases and policies to be used in the computation of estimates of "relief and rehabilitation" requirements. Although this work has not been completed and recommendations have not been made by the Council, it is suggested that this column be filled in as closely as possible in conformity with the Agreement, the resolutions adopted by the Council, and the trend of the current deliberations of the Committees of the Council for Europe and its sub-committees.

Please state in a separate memorandum how the agreed bases were applied in the determination of the quantity of each group or sub-group of commodities in the relief and rehabilitation import program. This memorandum should incorporate the standard or goal established for each type of relief and rehabilitation imports and the relation thereof to the volume of prewar imports. Where population data are a factor in the computation of the quantity shown, Governments may think it convenient to use the population figures resulting from the recent investigations in which they have been engaged. In any case the population figures used should be stated.

For food in the relief and rehabilitation program the information outlined in the two preceding paragraphs regarding the application of the bases should be given on the attached Schedule 2C. The entries for food items on Schedule 2A will of course be more detailed than those given on Schedule 2C, but the totals will agree with the totals in column 15 of that Schedule.

In calculating the program of relief and rehabilitation imports, please make the following assumptions:

(a) Agricultural production in 1944/5 will be at the rate prevailing in the crop year from 1 July 1943 to 30 June 1944, except in the case of countries where it is considered that this would give a seriously misleading picture. In such a case, any alternative used should be stated and fully explained;

(b) All other production and services will be at the rate prevailing on 1 June 1944;

(c) That ordinary conditions have been restored in the trade of home-produced supplies with the home territory of your Government.

Column 5. Although the Administration is asking for information on the amount and anticipated source of supply for goods from inside Continental Europe, it is not at this stage asking for information regarding the estimated cost of those goods or the financial arrangements that may be necessary.

Column 7. The prices indicated in Appendix A should be used where applicable.

Column 9. Indicate in this column the extent expressed in U.S. dollars to which your Government requests the Administration's financial assistance in meeting the cost of the relief and rehabilitation import program as shown in Column 8. If there are qualifying conditions affecting the ability of your Government to meet the remainder of the cost of relief and rehabilitation supplies, these should be discussed in a separate memorandum and briefly referred to in Column 13.

Column 10. Enter in this column, in metric tons, the estimated weight of the relief and rehabilitation import program set forth in Column 6. Conversion factors from number of units to metric tons must necessarily be approximate. The net weight of the commodities (exclusive of all packaging) should be used as the basis of the figures in Column 10. This column does not relate to shipping or measurement tons.

Column 11. On the basis of the priorities which your Government assigns to the several commodities, indicate in this column the weight (metric tons) of each commodity that your Government would desire to import for relief and rehabilitation if the total shipping available were sufficient to ship only 75% of the total in Column 10.

Column 12. Using the same method as in Column 11, enter the corresponding weight of the commodities that it would be desired to import if total shipping were reduced to 50% of the total in Column 10.

Column 13. Please use this column for any remarks that you may wish to make on any of the previous columns or to refer to any explanatory memoranda that you may wish to attach.

Schedules 2 (B) and 2 (C)

It is believed that these two Schedules do not call for explanation.

Hogs			
Poultry and birds			
Horses, asses, burros and mules			
Goats			
Miscellaneous live animals			
Agricultural Machinery and Implements, Including Accessories	"	370	370
Planting, seeding and fertilizing machinery			
Plows and listers			
Harrows, rollers, pulverizers and stalk cutters			
Cultivators and weeders			
Harvesting and haying machinery			
Machines for preparing crops for market and for use			
Farm dairy and poultry machines and equipment			
Barn and barnyard equipment			
Sprayers			
Hand Tools (hoes, scythes, rakes, etc.)			
Miscellaneous farm machines and equipment			

APPENDIX A: COMMODITY CLASSIFICATION AND APPROXIMATE PRICE QUOTATIONS - continued
SECTION 4: AGRICULTURAL REHABILITATION SUPPLIES

COMMODITY AND COMMODITY GROUP	UNIT	PRICE PER UNIT (U.S. DOLLARS)	PRICE PER METRIC TON (U.S. DOLLARS)
AGRICULTURAL MATERIALS, SUPPLIES, EQUIPMENT, AND TRACTORS - Continued			
Tractors, Farm Trailers, Trucks, and Wagons	Metric Tons	537	537
Tractors			
Farm Trailers			
Farm trucks (steel wheel) horse drawn			
Farm wagons (wooden gear and wheel), horse drawn			
Tractors, farm trailers, trucks, and wagons, n.e.c.			
Miscellaneous Agricultural Materials, Supplies and Equipment	"	500	500
Saddlery, harness, and whips			
Agricultural materials, supplies, and equipment, n.e.c.			
Binder Twine			
Sacks and other containers			
Veterinary Supplies			
Drugs and medicines	"	1,800	1,800
Dressings	"	770	770
Instruments	"	3,300	3,300
Biological products, sera, etc.			
FOOD PROCESSING PLANT AND EQUIPMENT			
Capital equipment, repair materials, raw materials other than agricultural products for food processing plants (including such items as tinplate)			
Agricultural transport and storage, especially refrigerated transport and cold stores.			
FISHERIES REQUISITES			
Nets, lines, ropes and canvas			
Engines and instruments			
Timber, metals and tools			
Electrical equipment			
Fishing gear other than above			
Equipment for crews			
Preservatives, paint and varnish			
FORESTRY REQUISITES			

1/ Please state type and content in pure N, P_2O_5 or K_2O.

APPENDIX A: COMMODITY CLASSIFICATION AND APPROXIMATE PRICE QUOTATIONS - Continued

SECTION 5: INDUSTRIAL REHABILITATION SUPPLIES

COMMODITY AND COMMODITY GROUP	UNIT	PRICE PER UNIT (U.S.DOLLARS)	PRICE PER METRIC TON (U.S.DOLLARS)
Industrial Equipment (Except Agricultural Communication and Transportation)			
General purpose industrial machinery and equipment	metric ton	350	350
Electrical machinery and apparatus	"	1,000	1,000
Special industry machinery (machinery for selected industries requiring specialized machines)	"	300	300
Metalworking machinery and equipment	"	1,000	1,000
Construction, mining excavating and related machinery	"	450	450
Office machines	"	750	750
Miscellaneous machinery	"	750	750
Communication and Transportation Equipment (Excluding Specialized Agricultural and Fishery Equipment)			
Communication equipment and electronic devices	"	750	750
Aircraft	"	2,000	2,000
Ships, small watercraft, and marine propulsion machinery	"	500	500
Railroad transportation equipment	"	1,000	1,000
Motor vehicles	"	700	700
Miscellaneous transportation equipment	"	1,000	1,000
Other Equipment (Except Agricultural)			
Plumbing and heating equipment	"	700	700
Air-conditioning and refrigeration equipment	"	1,000	1,000
Lighting fixtures	"	500	500
Furniture and fixtures	"	500	500
Photographic goods and processed motion pictures	"	2,500	2,500
Optical instruments and apparatus	"	5,000	5,000
Indicating, recording, and controlling instruments and accessories, except watches and clocks	"	2,000	2,000
Professional and scientific instruments and apparatus, except medical, indicating, recording, and controlling	"	5,000	5,000
Miscellaneous equipment	"	1,000	1,000
Miscellaneous Manufactured End Products (Tools, Utensils and Supplies, Except Agricultural)			
End products of leather, except apparel, footwear, saddlery and luggage	"	300	300
Converted paper products and pulp goods	"	350	350
Products of printing and publishing industries	"	500	500
Tires and other rubber end products, natural and synthetic, except footwear, clothing, medical and laboratory	"	2,000	2,000
End products of metal industries, except machinery and equipment	"	500	500
Furniture and millwork	"	500	500
End products of glass, clay, and stone	"	1,000	1,000
Miscellaneous end products of manufacturing industries	"	500	500
Fuel, Lubricants, Petroleum and Products			
Solid fuels	"	9	9
Fuel oils (for heating)	gallon	0.10	31
Kerosene (coal oil)	"	0.05	16
Gasoline for internal combustion engines	"	0.15	50

APPENDIX A: COMMODITY CLASSIFICATION AND APPROXIMATE PRICE QUOTATIONS - Continued
SECTION 5: INDUSTRIAL REHABILITATION SUPPLIES - Continued

COMMODITY AND COMMODITY GROUP	UNIT	PRICE PER UNIT (U.S.DOLLARS)	PRICE PER METRIC TON (U.S.DOLLARS)
Fuel, Lubricants, Petroleum and Products - Continued			
Gas oil, Diesel, and fuel oils for internal combustion engines	gallon	0.06	19
Lubricating oils and greases	"	0.50	157
Coal and petroleum gases	"	0.05	16
Crude petroleum products	"	0.05	16
Other petroleum products, except raw materials for chemical industries	metric ton	55	55
Miscellaneous Materials and Products			
Crude products, inedible	"	50	50
Wood and paper materials	"	100	100
Chemicals, except agricultural, medical, and laboratory reagents	"	150	150
Iron, alloys, and nonferrous metals	"	30	30
Raw materials other than coal and iron			
Steel	"	100	100
Fabricated metal basic products	"	100	100
Nonmetallic mineral basic products - chiefly structural	"	100	100
Nonmetallic mineral basic products - chiefly non-structural	"	100	100
Iron ore			
Pyrites
